

Microbial Needs: Glyphosate Degradation

Who? Bayer, long term users, farmers with plant disease issues (Tar Spot), food consumersworld wide.

Martha Carlin
Founder/CEO, The BioCollective & BiotiQuest

Yield and Shield™

Yield and Shield™ is a proprietary, patented microbial formulation that has both growth promotion and glyphosate bioremediation properties to help improve soil quality and microbial diversity while increasing yield in a natural, organic way without the use of chemical fertilizers or toxic materials.

Our Bacterial Strains are Unique

Our strains benefit from the wealth and lost biodiversity of ancient and unique environments. Such as amber and deep-sea cores using our proprietary process. These rare strains are genetically unique.

conversion of nitrogen in the air to nitrogen forms that can be taken up by the plants

3. Helps plant growth by enhancing phosphate and iron uptake by plants. It also produces auxin for plant growth regulation and enhanced cell division.

4. Serves as a biocontrol agent by the producing iron- and copper-binding compounds (siderophores) that serve as biocontrol agents for certain fungal and bacterial pathogens.

Yield & Shield is a Rationally Designed Guild

Yield and Shield™ is a proprietary, patented
